

Vector Logo Image Synthesis Using Differentiable Renderer

shape image

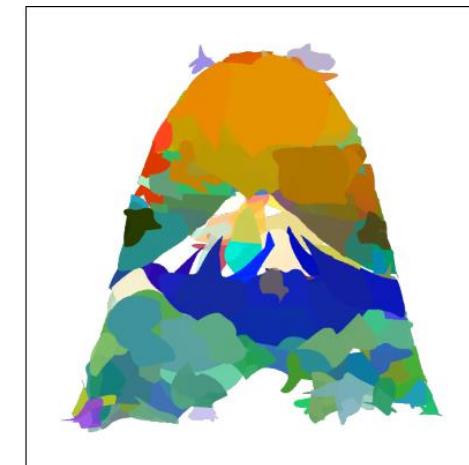

text prompt

“Mt. Fuji”

Generate

output

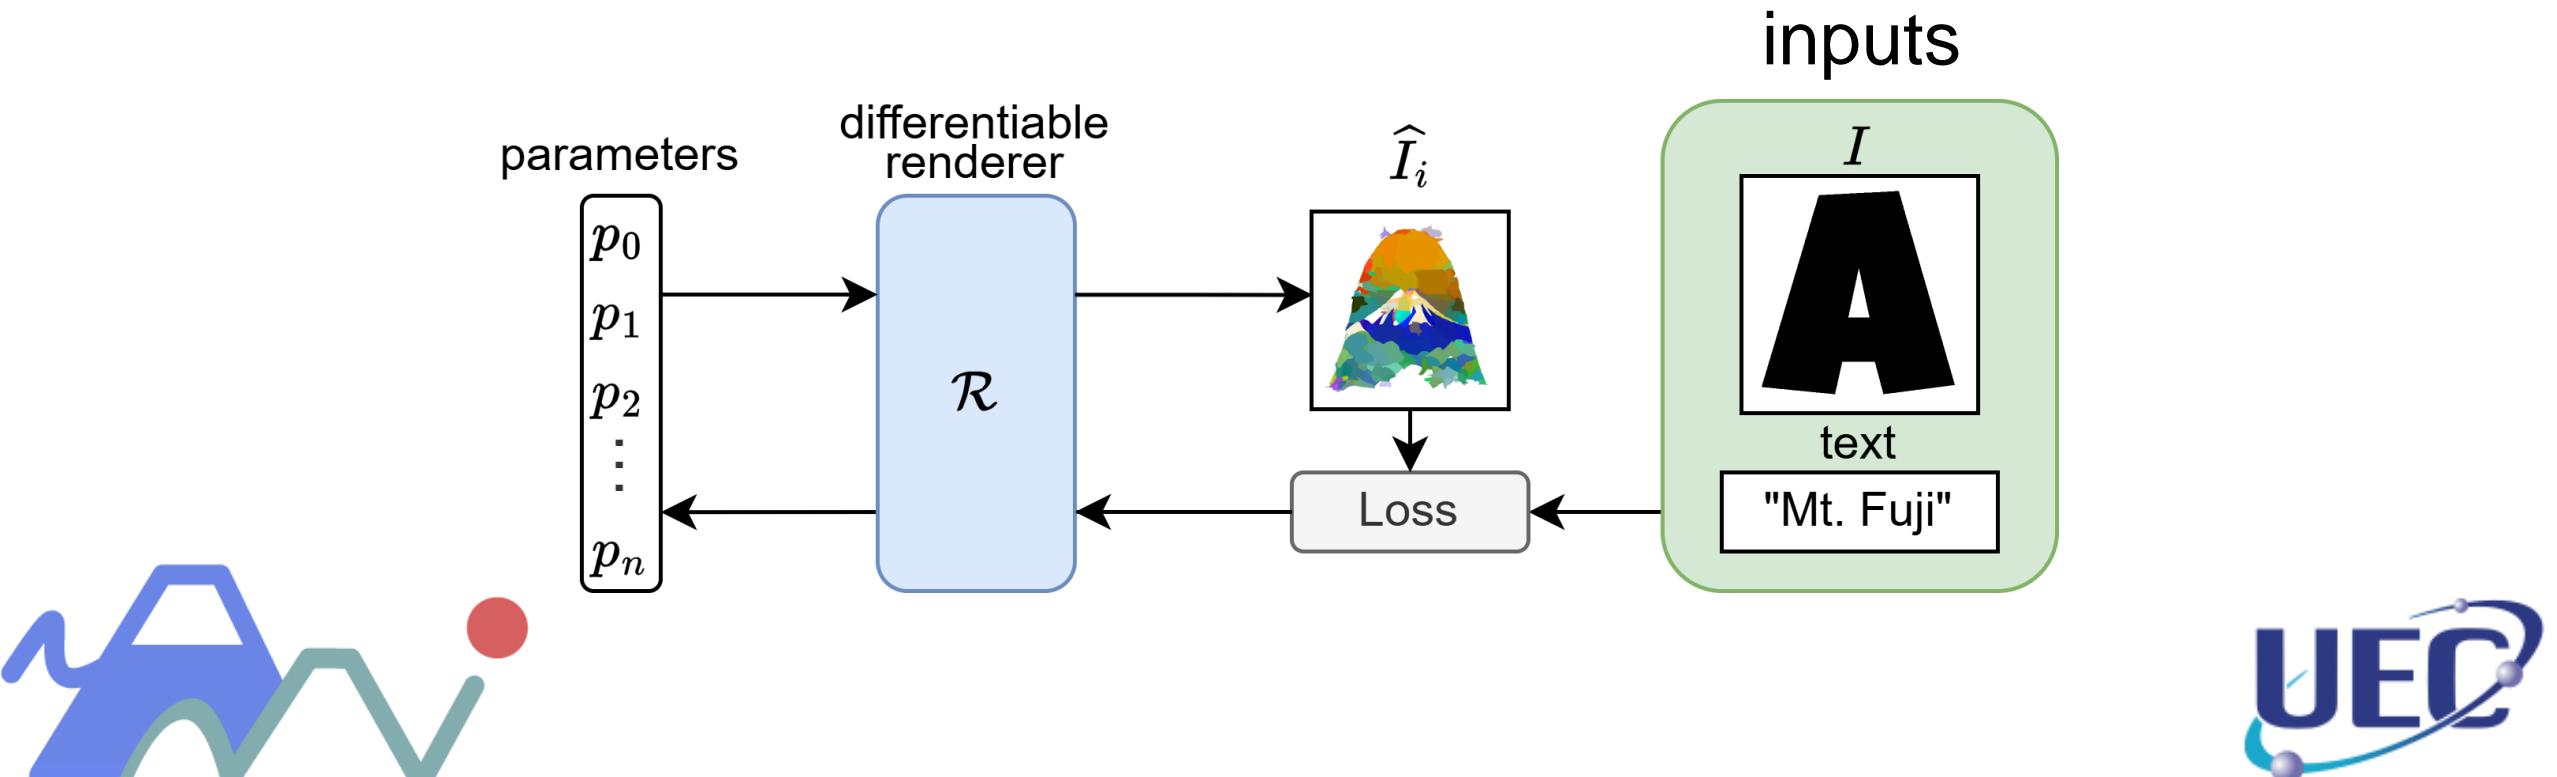

Stabilize the
shape of vector
paths

Abstract

- Generate vector images from text and shape image inputs.
- Optimize vector parameters directory with differentiable render^[1].

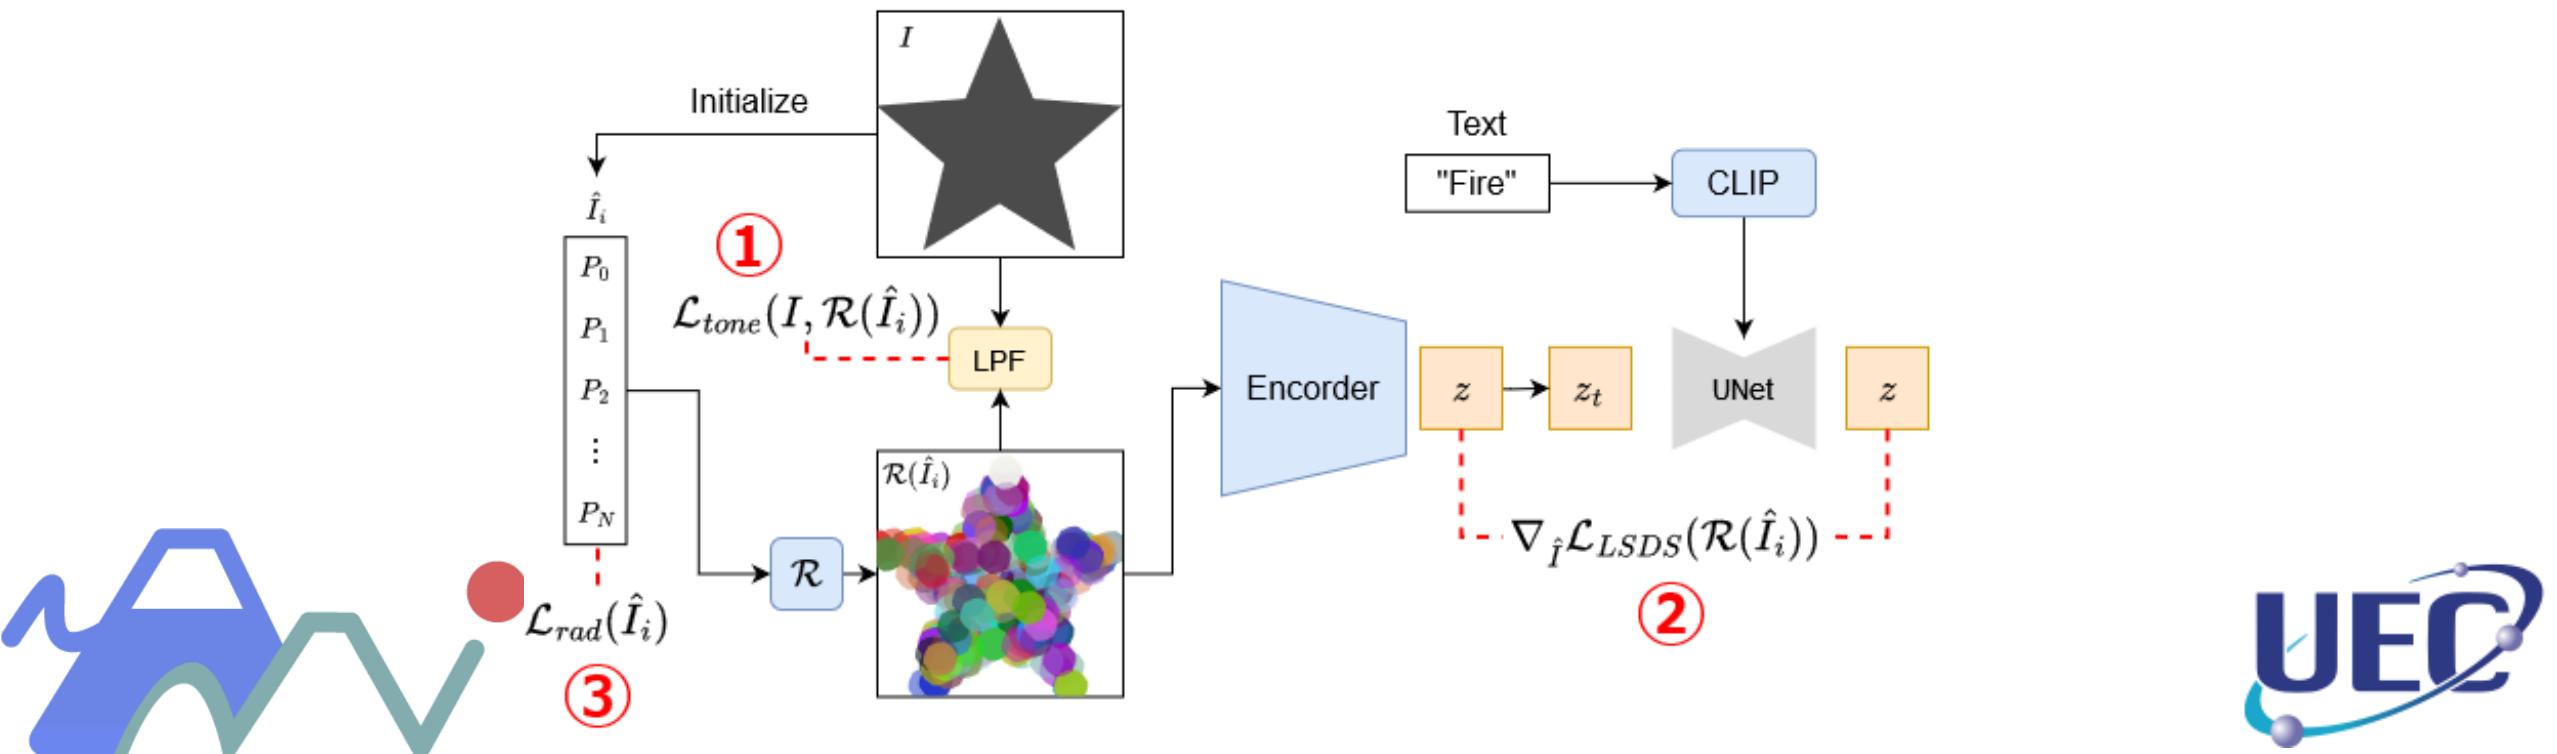

[1] Li, T., Lukáč, M., M., G. and Ragan-Kelley, J.: Differentiable Vector Graphics Rasterization for Editing and Learning, SIGGRAPH, (2020).

Abstract

- **Loss Functions**

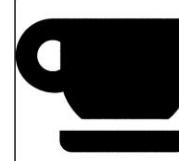

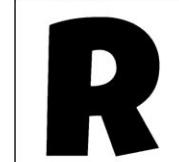

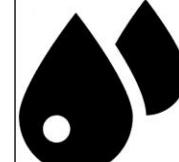

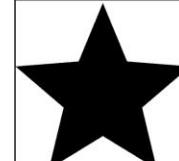

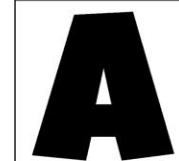

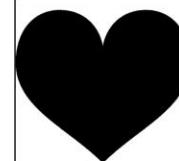

1. Tone Preserving Loss; reflect input image shape
2. SDS Loss; reflect input text contents
3. Radiation Loss; observe vector path parameters
